More versatile and Easier To Use

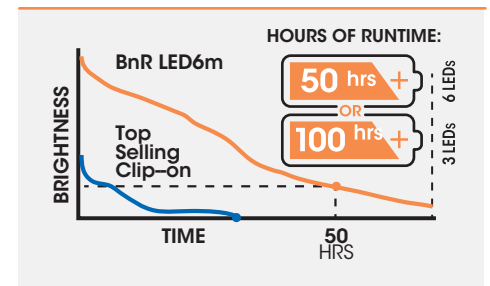

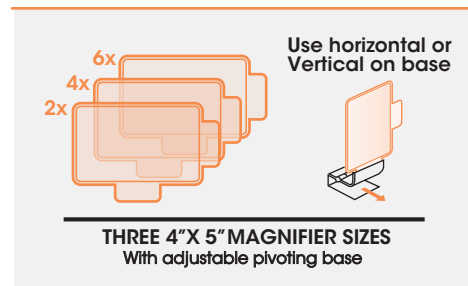

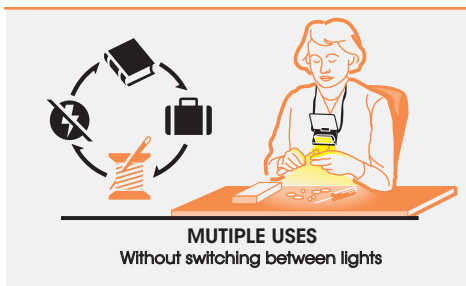

With its worn-around-the-neck design, and extra wide light, Beam n Read easily takes on tasks like beading, hand quilting and knitting, reading, walking in dim or dark places, and power outages. It works hands-free for crafting and for reading instructions, patterns, or a handwritten letter from mom. It doesn't add weight to a book or interfere with turning pages. And with two brightness settings of 3 or 6 LEDs, it's not too dim, not too bright, just right.

Zoom Into Your Work with Large Clip-On Magnifiers

Thread that needle, make that cross-stitch, or fasten that necklace clasp with the help of Fresnel (flat) magnifiers that clip on the back of the light. A set of three (2x, 4x, 6x) 4" x 5" lenses come with the BNR LED 6-3m and are available separately as the BNR CL3m for other models. They're great for short periods of detail work, close-up, and hands-free. These magnifiers are not low vision aids.

Save Money with Longer Battery Runtime

Beam n Read starts out brighter and stays bright for a lot longer—saving money since fewer batteries are used over time. Our 6 LED light is 3x as bright as the leading clip-on with more than 3x the battery runtime. Beam n Read lights use AA batteries, the most readily available size worldwide. Save batteries with the optional USB Power Kit that lets you plug into USB adapter/chargers and USB sockets in homes and hotels, cars, planes, computers and more.
