More versatile

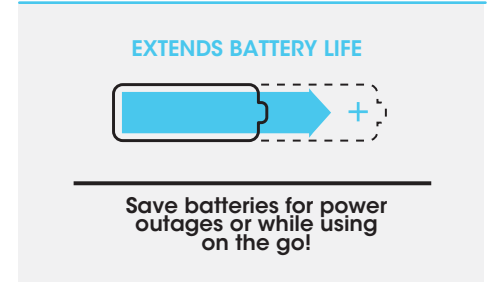

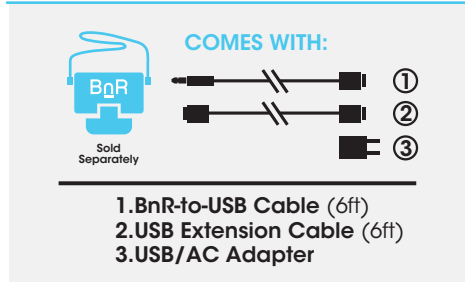

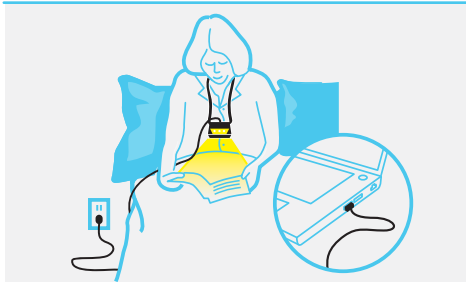

When you are near an outlet, Beam n Read Hands-Free Lights can be powered using our USB Power Kit that plugs into USB sockets. Now read that long chapter or add that extra stitch with the help of a wide bright beam. And when you need portability, just unplug and use batteries for a long-lasting light

Multiple Power Options

Installed in over 20 billion devices, USB has become the worldwide standard to access power for electronic devices. Plug into an AC outlet with the Beam n Read Power Kit's USB/AC adapter or plug into any USB (type A) socket. Plug into a USB car adapter/charger in your car, boat, or RV; the USB port on your computer; the USB socket for your airline seat, or USB sockets almost everywhere. Outside the US? Plug into a USB adapter for the local outlets

Save Money

The Beam n Read Power Kit bypasses the batteries while using external power sources. This saves battery power for when portability is needed or during power outages. And with Beam n Read's extra long battery runtime, when on the go you'll have personal light for a long time. The Kit enables use of external power sources. It does not recharge batteries.
